

ABSTRACT OF THE DISCLOSURE

A Chinese input method for providing an auxiliary writing model accelerates data processing for users. Also, it provides the users with expanded functions to customize models. The method comprises: (1) activating word processing software and opening a file editing block; (2) activating an input method interface through the file editing block; (3) selecting a writing model active button to execute a writing model menu module; and (4) the writing model content database returning the corresponding writing model content to the file editing block.
